VINIFICATION

The grapes are harvested and selected by hand, coming from the most suitable parcels of the winery which are located between 180 and 200 m.a.sl. The integral berries fall into the tanks by the use of gravity and undergo vinification divided by variety. Fermentation and maceration take place in stainless steel tanks for about 25/30 days at controlled temperatures not exceeding 28/30° C. The wine is then transferred to 50% new 225-liter French oak barrique where the malolactic fermentation is completed. After 14 months of aging in barrique, the wine is assembled and prepared for bottling. It rests in the bottle for about a year.

CLIMATE

Winter temperatures were average, and in the spring months of 2013, rainy and sunny days alternated. Temperatures were well below the seasonal average and carried into June delaying the growth of the vines. Low temperatures and heavy rains during the onset of fruit were responsible for lower yields. Summer was hot and short, rare rainfalls proved beneficial for the vines. A warm, dry September ensured perfect phenolic ripeness.
